Usage of this script:

If the exact Column name is known then specify the Column name to the stored procedure else include the wild cards

```
EXEC FindColumn 'EmployeeID'  
EXEC FindColumn '%Employee%'
```

```
Create Proc FindColumn  
@ColumnName nvarchar(50)  
As  
/*  
Purpose : Search for a Column in all databases  
Author : Sandesh Segu  
Date : 17th July 2009  
Version : 1.0  
*/  
Create Table #temp (DatabaseName varchar(50),SchemaName varchar(50)  
  
Declare @SQL Varchar(500)  
Set @SQL='Use [?];  
insert into #temp  
Select ''?' AS DatabaseName ,SS.Name as SchemaName ,ST.Name AS Tab  
from sys.tables ST ,sys.columns SC ,sys.schemas SS  
where SC.object_id=ST.object_id and ST.schema_id=SS.schema_id and S  
  
EXEC sp_msforeachdb @SQL
```
