Usage of this script:

If the exact table name is known then specify the table name to the stored procedure else include the wild cards

```
EXEC FindTable 'Employee'
EXEC FindTable '%Employee%'
```

```
Create Proc FindTable
@TableName nVarchar(50)
As
/*
Purpose : Search for a Table in all databases
Author : Sandesh Segu
Date : 17th July 2009
Version : 1.0
*/
Create Table #temp (DatabaseName varchar(50),SchemaName varchar(50)
Declare @SQL Varchar(500)
Set @SQL='Use [?];
if exists(Select name from sys.tables where name like '''+@TableName
insert into #temp
Select ''?' AS DatabaseName,SS.Name AS SchemaName ,ST.Name AS Tab
where ST.Schema_ID=SS.Schema_ID and ST.name like '''+@TableName+''
EXEC sp_msforeachdb @SQL
```
